Aberrant miR-1246 expression promotes radioresistance in non-small cell lung cancer: a potential prognostic biomarker and radiotherapy sensitization target [Retraction]

Fan LY, Wang J, Cao Q, Ding XP, Li BS. *American Journal Cancer Research*. 2020;10:314-335.

Cheeloo College of Medicine in Shandong University performed a self-check for previously published articles recently. We found several duplicate images in Figure 3 of this article.

Then we re-checked the lab records and raw data to make sure of its reproducibility and reli-

ability. Unfortunately, we did find some problems in the process and could not ensure its reliability. And the third authors, Qiang Cao, who was responsible for the bioinformatical and statistical analysis, insisted to withdraw this article. In this condition, we think this article is not suitable for publication. That was why we ask for the retraction of this published article.
